

WE CLAIM:

1. A method of interfacing on a network having a first computer system and a second computer system, where each computer system has a video display, the method comprising:

creating a first visual representation of a first user on the visual display of the first computer system and a second visual representation of a second user on the visual display of the second computer system; and

displaying the second visual representation on the video display of the first computer system and the first visual representation on the video display of the second computer system.
